                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 14, Application PC/TUS0304088
GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Beigelman, Leonid
TITLE OF INVENTION: RNA Interference Mediated Inhibition of Telomerase Gene
TITLE OF INVENTION: Expression Using Short Interfering RNA (siNA)
FILE REPERENCE: 02-708-A (400/080)
                                                                                                                                                                                                                         Gaps

Sequence 539, Application PC/TUS0304088

GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: McSwiggen, James
APPLICANT: McSwiggen, James
TITLE OF INVENTION: RNA Interference Mediated Inhibition of Telomerase Gene
TITLE OF INVENTION: Expression Using Short Interfering RNA (siNA)
FILE REFERENCE: 02-708-A (400/080)
CURRENT FILING DATE: 2003-04-28
CURRENT APPLICATION NUMBER: US 60/396,600
PRIOR PILING DATE: 2002-07-17
PRIOR FILING DATE: 2002-03-11

(ILLU-) ILLUMINA INC. WPI; 2002-292068/33. Gunderson K;

Array comprising adapter sequences useful for immobilizing or detecting a target nucleic acid sequence, has different addresses comprising different specific capture probes .

Claim 1; Page 189; 261pp; English

The invention relates to an oligonucleotide array (1) comprising at least 25 different addresses (adapter sequences) with each comprising a different capture probe selected from a group consisting of the sequences given in ABQ00010-ABQ13409. (1) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid (ABQ00010-ABQ13409) to a target nucleic acid to form a modified target nucleic acid and contacting the modified target nucleic acid above method is useful for detecting a target nucleic acid with (1). The steps of above method is useful for detecting a target nucleic acid, with (1) which further comprises detecting the presence of the modified target

(I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid and contacting the modified target nucleic acid and contacting the modified target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid with (I), which further comprises detecting the presence of the modified target
   reactive activities. DKGR nucleic acids may be sequenced and subjected to site specific mutagenesis to develop modified DKGR with desired and subjected to properties that are absent or less pronounced in the wild-type proteins, such as greater catalytic efficiency, stability to heat, solvent tolerance, NADH dependent activity and different optimum pH. The sequence presented is the PCR primer, 2815, used to amplify 2,5-diketo-D-gluconic acid reductase d (DKGRd) gene (clone pI-28) from DNA extracted from soil samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Array comprising adapter sequences useful for immobilizing or detecting a target nucleic acid sequence, has different addresses comprising different specific capture probes -

25 different addresses (adapter sequences) with each comprising a different capture probe selected from a group consisting of the sequences yether and apploant ARQUAGO. (I) is useful for immobilising a target nucleic acid sequence by attaching a adapter nucleic acid acquence by attaching a adapter nucleic acid and contacting the modified target nucleic acid and contacting the modified target nucleic acid with (I). The steps of above method is useful for detecting a target nucleic acid with (I), which further comprises detecting the presence of the modified target

cDNA. R35 is a seven transmembrane receptor which is useful for treating neuropathic pain, inflammatory and chronic pain, incontinence, and disorders of the gastrointestinal tract associated with gut metility and secretion such as irritable bowel syndrome. It is also useful for inducing an immune response in a mammal to protect against the diseases. It is useful in screening assays to identify compounds which stimulate or inhibit the function of the polypeptide, to identify membrane bound or soluble receptors and also for the structure-based design of an agonist, antagonist or inhibitor of R35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention discloses the isolated polypeptide, and polynucleotide encoding it, 2,5-diketo-D-gluconic acid reductase (DKGR) which is a member of the aldo-keto reductase superfamily. The reductase, in a particular in Pantoea sp., is useful for converting glucose to ascorbic acid, by culturing the host cell under conditions suitable for the expression of DKGR. Glucose is first converted to 2,5-diketo-D-gluconic acid by endogenous oxidases and this is then reduced enzymatically to 2-keto-L-gulonic acid by a heterologous DKGR expressed in the production strain of bacteria. DKGR nucleic acids and proteins are useful to make enzymes useful in industrial processes to convert glucose to vitamin C in a single organism. DKGR proteins or their fragments and derivatives are useful as immunogens to produce antibodies useful in screening for similar enzymes from other organisms and samples. These antibodies are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Diketo-D-gluconic acid reductases, isolated from the environment using polymerase chain reaction methods, useful to provide new catalysts with desirable traits for industrial processes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2,5-diketo-D-gluconic acid reductase d; DKGRd; aldo-keto reductase; glucose; ascorbic acid; 2-keto-L-gulonic acid; vitamin C; immunogen; catalytic efficiency; thermal stability; solvent tolerance; pH optimum; PCR; primer; ss; pI-28.
                      sequence was used in the cloning of full-length mouse R35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PCR primer, 28L5, used to amplify 2,5 DKG reductase d (clone pl-28)

One Hutch strain (HCV-H) of NANBV, designated the Hutch c59 isolate (HCV-Hc59) was propagated through passage in animals and the entire viral genome was cloned and sequenced from the Five microg of purified liver or plasma derived from HCV RNA was used per cDNA priming reaction. Specific nucleotide primers derived from published HCV sequences and spanning the entire reported genomic sequences were used to prime the reaction. Selected target sequences were amplified using a PCR-based approach using a variety of nucleotide primers. The nucleotide sequences of the primers are given in AAQ22872-936 and AAQ24472. Amplified sequences were subsequently isolated, rendered blunt-ended and

Human; chromosome 1p36-35; chromosome 21q22.1; genetic analysis; 11-APR-2002 (first entry)

The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in method comprises numbered for discrimination are mixed in each of the multiwell plates; (b) a primer designed based on the chromosome marker contributed in a signal corresponding to the marker is detected from the resultant amplified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order contemporation in the specified discrimination Nos. of the multiwell containing the clones in the multiwell plates of the specified discrimination Nos. core mixed respectively in each wells of longitudinal configuration Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the containination containing the amplified products; (h) the clones in the multiwell configuration is a sequence of the specified containing the specified from the amplified products; (h) the clones in the multiwell containing the specified from the amplified products of the specified containing the PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634 represent PCR primers for human chromosome 21q22.1, which are specifically claimed for use in the present invention.                                         acid (PNA) oligomers for detecting single nuclectide polymorphisms (SNP) and cycosine methylation status in chemically pretracted genomic DNN. The oligomuclectides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010-ABE99989, ABF00010-ABE99989 and ABE00010-ABIS9973 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
                      This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleic acid. The method comprises monitoring the dispersion of a mixture of a sample and a probe labelled with a fluorescent intensity of a mixture of a sample and a probe labelled with a fluorescent intensity of a mixture of a sample and a probe labelled with a fluorescent the functional time for contains a base sequence complementary to a specific nucleic acid in the sample. The method is useful for clinical gene diagnosis by exploring unknown genes. It is useful for evaluaring the homology of an unknown gene with a control gene sequence and as a method of detecting genetic mutations e.g therapy for hepatitis C virus (HCV). The method is quicker and requires less labour as it specifically detects and quantifies the hybrid in a simple one-step measurement without requiring the separation of excess unhybridised probe. The method is more sensitive and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A method has been developed of measuring the melting temperature of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is based on a fragment of a mycobacterial gene which encodes a protein homologous to the 65KD antigen of mycobacterium. TB-5 is used in a pair as a primer to amplify mycobacterial genes to detect mycobacteria. The oligonucleotide can also be used as a labelled probe to detect amplified mycobacterial sequences. It reacts specifically with Mycobacterium avium DNA. See also AAQ06505-Q06515, AAQ06517-Q06523 and AAR08336.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

AV34748-V34756 are primers used in the isolation of human and mouse type II interleukin-1 receptor (IL-IR) which is used in a method to investigate the regulation of the immune or inflammatory response in a mammal. This method involves administering a soluble type-II IL-1 receptor protein in an amount effective to bind to IL-1 and prevent treating alloantigen-induced rejection of transplanted tissues or organs, graft-versus-host disease and autoimmune dysfunction dependent upon the activation of T cells against self antigens, selected from rheumatoid arthritis, diabetes mellitus or multiple sclerosis.
                                                                                              Regulation of interleukin-1 mediated immune or inflammatory response in mammal - comprises administering soluble IL-1 receptor protein, used in treatment of e.g. graft versus host disease and multiple

New G-protein coupled receptors and the polynucleotides encoding them,

PCR primers AAF80328-30 were used to amplify CDNA encoding a chuman G-protein coupled receptor designated IGS4 Exists in two chuman G-protein coupled receptor designated IGS4. IGS4 exists in two polymorphic forms, IGS4A and IGS4B. The IGS4 receptors and IGS4 colymucleotides are useful for preventing, ameliorating or correcting or correcting cyefunctions or diseases. These diseases include peripheral nervous system, psychiatric and central nervous system disorders (e.g. sofizophrenia, epilopsy, bulimia or stroke), cardiovascular diseases (e.g. heart failure, angina pectoris, myocardial infarction or correction disorders (e.g. inflammations, bulimia or stroke), cardiovascular diseases of cateoporosis, inflammations, infections (e.g. bacterial, fungal, cateoporosis, inflammations, infections (e.g. bacterial, fungal, cateoporosis, inflammations, infections (e.g. bacterial, fungal, cappineral nervous system, candrovas system, cardiovascular system, select muscle, thyroid, lung or system, cardiovascular system, skeletal muscle, thyroid, lung or system, cardiovascular system, select muscle, the IGS4 polynucleotides care useful as diagnostic for detecting under-expression, ö preventing, ameliorating or correcting nervous system cardiovascular diseases, dyslipidemias, inflammations, pain Gaps ; Length 26; 0; Indels 60.0%; Score 12; DB 22; L 100.0%; Pred. ```
Sequences shown in AAV41169 to AAV41181 represent antisense
cligonucleotides to the RNA component of human telomerase (hTR). These
antisense oligonucleotides specifically hybridise to a nucleotide
caquence within an accessible region of the hTR, but that does not
hybridise to a sequence within the template region of hTR. These
cligonucleotides may specifically be used for detection of an RNA
component of human telomerase in a sample. This is useful for diagnosing
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
and providing prognosis for a cancer patient. The inhibitory
cligonucleotides can inhibit the telomerase activity level in a
interfering with transcription of the RNA component, decreasing the
half-life of the telomerase RNA component transcript, inhibiting the
cof the RNA component into the telomerase holoenzyme, or inhibiting the
polymerase activity of telomerase activity in both cultured cells and in
be used for inhibiting telomerase activity in both cultured cells and in
                                                                                                                                                                                                                                                                                                                                                                                                                             cells in vivo. They can be used in therapeutics for treating or preventing cancer, for contraception or sterilisation, for immunosuppression, and for selectively down-regulating specific branches of the immune system, e.g. a specific subset of T-cells, in anti-inflammatory therapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            component; human telomerase; antisense oligonucleotide; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              neuroblastoma; bladder cancer; colon cancer; prostate cancer; cancer; contraception; sterilisation; immunosuppression; therapeutic; hTR; immune system down-regulation; anti-inflammatory therapy; ss.
                New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 20; DB 19; Length 20; 100.0%; Pred. Sequences shown in AAV41169 to AAV41181 represent antisense
oligonucleotides to the RNA component of human telomerase (hTR). These
artisense oligonucleotides specifically bybridise to a nucleotide
sequence within an accessible region of the hTR, but that does not
oligonucleotides may specifically be used for detection of an RNA
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a cancer patient. The inhibitors
component of human telomerase in a cancer patient. The inhibitory
coligonucleotides can inhibit the telomerase activity level in a cell by
interfering with transcription of the RNA component decreasing the
half-life of the telomerase RNA component transcript, inhibiting the
collymerase activity of telomerase. These antisense oligonucleotides can
collymerase activity of telomerase activity in both cultured cells and in
cells in vivo. They can be used in therapeutics for treating or
preventing cancer, for contraception or sterilisation, for
immunosuppression, and for selectively down-regulating specific branches
cof the immune system, e.g. a specific subset of T-cells, in
anti-inflammatory, therapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Type II interleukin-1 receptor; IL-1R; immune response; inflammation; regulation; soluble; cell surface receptor; treatment; alloantigen; fissue; organ; rejection; transplant; graft-versue-host disease; human; autoimmune dysfunction; T-cell activation; self antigen; primer; rheumatoid arthritis; diabetes mellitus; multiple sclerosis; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                     June 22, 2003, 18:09:32 ; Search time 132.908 Seconds (without alignments) 338.880 Million cell updates/sec

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 30;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Indels
                                                                                                                                                                                                                                                                                                                              Patent No. 6174668
GENERAL INFORMATION:
APPLICANT: Lynn Bergmeyer, John B. Findlay
TITLE OF INVENTION: DIAGNOSTIC COMPOSITIONS, ELEMENTS,
TITLE OF INVENTION: METHODS AND TEST KITS FOR
TITLE OF INVENTION: AMPLIFICATION AND DETECTION OF TWO
TITLE OF INVENTION: OR MORE TARGET DNA'S USING PRIMERS
TITLE OF INVENTION: HAVING MATCHED MELTING TEMPERATURES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTR: U.S.A.

Sequence 12, Application US/08961888

Patent No. US20010016351A1

GENERAL INFORMATION:

APPLICANT: Padgett, Kerstien

APPLICANT: Sorge, Joseph

TITLE OF INVENTION: No. US20010016351A1e1 Vector For Gene Expression

TITLE OF INVENTION: In Prokaryotic And Eukaryotic Systems

TORRESPONDENCE ADDRESS:

ADDRESSEE: Howrey & Simon

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ptodata/2/pna/US6021_COMB.seq:*

GENERAL INFORMATION:
APPLICANT: Realey, James T.
APPLICANT: Weinrich, Scott L.
TITLE OF INVENTION: Inhibitory Polynucleotides Directed
TITLE OF INVENTION: Inhibitory RNA Component of Telomerase
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSEE: TOWNSEND and TOWNSEND and CREW LLP
STREET: TWO Embarcadero Center, 8th Floor
CITY: San Francisco
                                                                                                                                                                                                                                                                                                   Ouery Match
